

FIRE PROTECTION SYSTEMS FOR HEAVY DUTY MOBILE EQUIPMENT

In the mining industry, safety is paramount. When it comes to Heavy Duty Mobile Equipment (HDME), the risks associated with fire incidents can be particularly severe. That's where automatic fire suppression systems come into play; Designed to mitigate the risks, safeguard operations, and protect both the mine workers and the valuable assets.

Dafo Vehicle fire suppression systems are specifically engineered to detect and suppress fires in their early stages, preventing them from escalating into catastrophic events. By combining advanced detection and rapid response capabilities, Dafo Vehicle Fire Suppression Systems provide an effective defense against potential fire hazards.

The systems are designed to survive challenging demanding conditions, secure the safety of operations and business continuity, as well as the impact on investment.

Dafo Vehicle's robust system not only protects individual hazards within the vehicle, but it is also a system that easily can be maintained and refilled on-site which reduces downtime and operational costs with very low TCO.

DAFO VEHICLE FIRE SUPPRESSION SYSTEMS

A tested and certified fire suppression system in combination with efficient fire detection is the best first line of defence in case of an emergency. The Dafo Vehicle fire suppression system, equipped with a linear heat detector wire, responds immediately to any increase in temperature. Its fully automatic system detects and quickly extinguishes the fire. The suppression agent is released through a pipe system with specially designed nozzles that effectively cover the protected areas. Upon request manual release of the system can be provided.

FORREX EVO - MAKES THE DIFFERENCE

The basis of Dafo Vehicle's system is the suppression agent Forrex EVO which is 100% flourine free and specially developed to suppress fires in combustible engines. Forrex EVO is highly effective on flammable liquid fires like petrol, diesel and hydraulic oils. The system combines the features of liquid and dry chemical, includes unique and propriety tailormade solutions and offers outstanding flame knockdown and unique protection against re-ignition as it will cool down the overheated engine parts in case of a thermal event.

OCCUPATION SAFETY AND HEALTH (OSH)

The harmless extinguishing liquid and normally non-pressurized containers presents no health risk to operators or staff.

BENEFITS

- Strong cooling effect
- Effective Flame Knockdown
- Film forming effect to prevent re-ignition
- Non-pressurized container
- High penetration capability
- Freeze protected down to -50° C
- Easy maintenance
- Easy to clean up after discharge
- Independent system
- Non-corrosive

FUNCTION

Fire is indicated by a linear heat detector wire (1) that sends a signal to the actuator (2) which punctures the burst disc of the propellant gas cartridge (3) and releases nitrogen to the agent container (4) that distributes the Forrex EVO agent liquid to the nozzles (5) through the pipe system (8). At the same time the alarm system is activated, an alarm horn (6) in the vehicle and a light signal in the panel will warn the driver (7).

STANDARDS & CERTIFICATES

Standards and regulations are a central part of our business operation and cover most of our products and system designs.

Dafo Vehicle honors and fulfills all valid standards and regulations in the markets where we operate. We are constantly working to obtain all relevant certifications where it is applicable.

SBF 127:17 and AS 5062 are some of the certificates that we hold.

HEXA+

Hexa + is a methodology used when Dafo Vehicle collaborates with customers around the world to ensure that people, vehicles and businesses are not harmed by fire.
